Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Choice "Vector: Delluescript SK(-); Site_1: EcoRI; Site_2: Khol; supplier: Cornell University, Fry lab; sequencing: The Institute for Genomic Research; Whole plants were challenged with 20,000 sporangia/ml of the compatible P. infestans isolate US 940480. Leaf tissue was collected at 3, 6, 9, 12, 24, 48, 72 hours after incoulation and frozen plants showed first symptoms of infection at 48 hours after incoulation. NOTE: We cannot exclude the possibility that this sequence is actually derived from Phytophthora rather than potato."

/note="vector: pBluescript SK(-); Site_1: BCoRI; Site_2:
Xho1; This library targets genes expressed in dormant
tubers. This library was made from sections of dormant
tuber, avoiding the buds and epidermis. Tubers were stored
for one month post-harvest at 4oc. The tuber was peeled,
well away from the surface. Then it was chopped into 1-2
mm cubes and immediately frozen in liquid nitrogen. This
library is noted as P4 in Tanksley lab notebooks."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    759 bp mRNA linear EST 07-MAR-2003

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 15236,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1209, Application US/09016434

| Sequence 1209, Application US/09016434
| Patent No. 650038
| GENERAL INFORMATION:
| APPLICANT: Janice Au-Young
| APPLICANT: Jeffery J. Seilhamer
| TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
| TITLE OF INVENTION: PATHWAY GENE EXPRESSION
| NUMBER OF SEQUENCES: 1490
| CORRESPONDENCE ADDRESS:
| ADDRESSE: INCYTE PHARMACEUTICALS, INC.
| STREET: 3174 PORTER DRIVE
| CITY: PALO ALTO
| STATE: CALIFORNIA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                  COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5" diskette, 1.44 MB, high density
COMPUTER: 1BM PS/2, model 55 SX
COPERATING SYSTEM: MS-DOS version 4.0
SOFTWARE: VAX/WS MSs811 via Kermit to IBM MS-DOS
CURRENT APPLICATION DATE:
APPLICATION NUMBER: US/08/474,986
FILING DATE: 07-Jun-1995

It currently consists of 23 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequencing vector: M13; 100%

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a composition, which comprises at least one antisense oligonucleotide that is complementary to folliclestimulating hormone receptor (FSHR) coding sequence. The present sequence is one such oligonucleotide used in the composition. The composition of the present invention can be used for regulating hormones of a host. The composition, the composition is useful as a chemopreventive or chemotherapy for cancers (e.g. breast, bladder, cervix, lung, liver, ovary, colon, scomach, or especially ovarian cancers), gestational trophoblastic tumours or testicular germ cell tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition for regulating fertility, and for chemoprevention and chemotherapy of cancer, comprises an antisense oligonucleotide that is complementary to a nucleotide sequence of a follicle-stimulating hormone
composition is also useful for regulating fertility and menstrual cycle. In addition, the composition is useful as a chemopreventive or chemotherapy for cancers (e.g. breast, bladder, cervix, lung, liver, ovary, colon, stomach, or especially ovarian cancers), gestational trophoblastic tumours or testicular germ cell tumours
                                                                                                                                                                                                                                                                                                                                                                                                                       Human; cytostatic; follicle-stimulating hormone receptor; FSHR; fertility; menstrual cycle; chemopreventive; chemotherapy; cancer; ss.

```

```
The invention relates to a novel isolated GPCR (G-protein coupled receptor) nucleic acid molecule. The polynucleotide and polypeptide of receptor) nucleic acid molecule. The polynucleotide and polypeptide of the invention demonstrate neuroprotective, nockropic, tranquiliser, antimaric, antimaric, antimaric, antimaric, antimaric, osteopathic, antimaric, antimaric, osteopathic, uropathic, antimaricant antiallergic properties. The nucleic acid molecule and polypeptide of the invention may be useful in diagnosing, preventing, treating or ameliorating a medical condition, such as a disorder related to abstrant G-protein coupled signalling, a disorder related to abstrant cell sportern coupled signalling, a disorder; severe mental retardation and dyskinesias, brain disorders, spinal cord disorders, affective and dyskinesias, brain disorders, and concers, affective disorders, immune-related disorders, endocrinal diseases, growth cancers, eating disorders, HIV infection, cancers, metabolic disorders and pituitary disorders. Furthermore, the polynucleotide may be used in chromosome identification, in identifying organisms from minute chromosome identification, in identifying organisms from minute bological samples, in gene therapy or as a molecular weight marker. The current sequence is that of a human GPCR (G-protein coupled receptor) DNA
                                                                                          GPCR; G-protein coupled receptor; neuroprotective; nootropic; tranquiliser; antimigraine; neuroleptic; antimanic; antidepressant; antionvalulant; antiparkinsonian; cytostatic; cardiant; hypotensive; antianginal; analgesic; ancetto; anti-HIV; antiasthmatic; osteopathic; uropathic; antiulcer; antiallergic; call cycle regulation; neurological; severe mental retardation; dyskinesia; brain; spinal cord; affective; neoplastic; cardiovascular; immunological; immune; endocrinal; growth; chromosome identification; gene therapy; human; ds; gene; follicle stimulating hormone; FSH receptor variant.
Human GPCR follicle stimulating hormone receptor variant "Gene 4" DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid molecule encoding a human G-protein coupled receptor, useful for diagnosing, preventing or treating diseases involving the receptor, e.g. Parkinson's disease, dementia, asthma, hypertension or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /*tag= a

The present invention describes novel numan proceding, designated NovX proteins. The NovX sequences have cardiant, antiatteriosclerotic, contropic and antiate that the NovX sequences have cardiant, antiate immunosuppressive, typotensive, vasotropic, dermatological, anorectic, immunosuppressive, cycostatic, antinfertility, haemostatic, antiathmatic, antiathmatic, antinferture of antiantiathmatic, notropic and antiathmatory, neuroprotective, anabolic, nootropic and antiathmatory neuroprotective, and can be used as a therapeutic in the manufacture of a medicament of contropic as a contropic and antiathmatic sequences can be used as a therapeutic in the manufacture of a medicament of tor treating asyndrome associated with NoVX. The NoVX proteins and nucleic acids are notitions are useful for diagnosing or treating pathologies, diseases or conditions associated with NoVX sequences, including cardiomyopathy, atherosclerosis, scleroderma, obesity, metabolic disturbances associated with cobssity, transplantation, adrenolable/doyserophy, congenital adrenal obssity, transplantation, adrenolable/doyserophy, congenital adrenal cobssity, transplantation, adrenolable/doyserophy, congenital adrenal constraints, and wasting disorders, metabolic discase, anorexia, neurodegenerative disorders, hadenocation and wasting disorders associated with chronic diseases.

Cr Parkinson's disease, immune disorders (e.g. Alzheimer's disease, dyslipidaemias, and wasting disorders associated with chronic diseases. The proteins can also be used as immunogens to produce antibodies and as vaccines. The sequences may further be used in chromosome mappathy, cand in forensic identification of a biological sample. The present cycles human Nov3a from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /*tag= c

```
A DNA sequence (AAT63181) comprises the coding region from exons 1-10 of the wild-type fabr gene that codes for human follicle stimulating hormone (FSH) receptor (AAM14782). A C to T mutation in exon 7 (codon 189) is associated with ovarian dysgenesis. In a method for determining a FSH receptor genotype in a human patient, fshr exon 7, or a portion of it, is isolated by PCR amplification (see also ART63195-96) and exposed to BsmI. Exon 7 contents a unique BsmI site which, if mutated, will produce no BsmI digestion products, thereby enabling diagnosis of ovarian dysgenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diagnosis of ovarian dysgenesis and carriers from DNA abnormalities - by amplifying DNA including follicle stimulating hormone receptor allele(s) i.e. codon 189, cleaving fragments, and examination.

                                     The DNA sequence encoding human follicle stimulating hormone receptor (FSHR) was obtd. by screening a lambda gtll cDNA library constructed from RNA extracted from human testis and amplified, with a rat FSHR cDNA clone as a probe. Positive colonies were used for a secondary screen which the complete five putetive human FSHR clones. None of the clones contained the complete hESHR coding region but could be overlapped using GCG to give the complete sequence. HFSHR binds to FSH to reduce endogenous FSH bloactivity, in females to prevent follicle growth and maturation and in males to prevent spermatogenesis, i.e. as a birth control agent. (Updated on 25-MAR-2003 to correct PN field.)

 New follicle stimulating hormone receptor - and derived antibodies, antidiotypic antibodies, and transfected cells, useful e.g. in diagnosis and as antidote for FSH overstimulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The primers given in AAQ50029-34 were used in the cloning of GST-FSH- R1, GST-FSH-R2 and GST-FSH-R3 fusion protein constructs. Screening of the Muman testis cDNA library with a hFSH-R specific probe resulted in five recombinant phages positive in hybridisation. Sequence analysis was performed of the 2222 bp fragment of pGEM3Zc1 (AAQ50013). (Updated on 25-

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or controlled on the sample and the sample of antibody against a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, GPCRs. The antigenic peptides for GPCRs and antibodies are useful for allowing disease, GPCRs and Allowing disease, GPCRs. The antipodies and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, anxiety, depression, schizophrenia, dementia, mental retardation, memory closs, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, or any other disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved The antibodies may be considered in immunoassays and immunodiagnosis. Allowing the antibodies may be considered in immunoassays and immunodiagnosis. polymucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of target polymucleotides. The microarray is particularly useful in the diagnosis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnosics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, forensics and pharmacogenomics. The microarray is also useful for monitoring progression of disagnosics and therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and disagnostic applications. The array can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose and paramacogenic energian expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose and Parkinson's disease including cancer e.g. adenocarcinoms and laukaemia, immunopathies e.g. Albs and asthma, neuropathies e.g. Alaheimer's disease and Parkinson's disease. The present sequence represents a polynucleotide form part of the printed specification but was obtained in electronic form at directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; probe; 88; receptor-like polypeptide; transducing polypeptide; effector-like polypeptide; cancer; immunopathology; neuropathology; drug development; toxicology; carcinogenicity; signalling pathway polypeptide; adrenal gland; bladder; bone; bone marrow; brain; breast; cervix; tumour; immunopathology; diabetes; pancreatitis; osteoporosis; ulcerative colitis; neuropathology; dementia; amnesia; epilepsy; Alzheimer's disease; depression.

The invention relates to a composition of polynuclectide probes comprising a receptor-like polymetic second polynuclectide probes comprising at least a portion of a gene encoding a treasfor-like polymetic comprising at least a portion of a gene encoding a transducing polypeptide and third polynuclectide probes comprising at least a portion of a gene encoding an effector-like polypeptide. The probes of the composition are useful as array elements in a microarray for monitoring the expression of target polynuclectides. The microarray for monitoring the expression of target polynuclectides. The microarray is useful in the diagnosis and treatment of cancer, an immunopathology or a curropathology. It can also be used for drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. Microarrays can also be used for monitoring the progression of diseases that may be associated with the altered expression of signalling pathway colypeptides. The composition can also be used for monitoring the expression profile is also useful for the diagnosis and treatment of cancer, e.g. cancers of the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix, an immunopathology, e.g. AlDS, diabetes, pancreatitis, or a neuropathology, e.g. dementia, annesta, culcerative colitis, or a neuropathology, e.g. dementia, annesta, epilepsy, Alpheimer's allease or depression. This sequence represents an experience.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human polynucleotide probe of the invention. Inls sequence represents a this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                     New composition comprising polynucleotide probes, useful as array elements in a microarray for monitoring the expression of target polynucleotides or purifying a subpopulation of mRNAs, cDNA, or genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        G protein-coupled receptor; GPCR; drug screening; diagnosis; transgenic mouse; neurological disorder; adrenal gland disorder; colon disorder; intestinal disorder; cardiovascular disorder; muscular disorder; blood disorder; immune disorder; bone disorder;

The invention comprises amino acid and DNA sequences which are present in normal and neoplastic ovary cells. The DNA and protein sequences of the invention are useful for determining the presence of an ovary specific nucleic acid or an ovary specific protein in a sample. The DNA and protein sequences of the invention are useful for diagnosing and menitoring the presence and metastasis of ovarian cancer and breast cancer. Nucleotides ABT03285 - ABT03421 represents the ovary cell specific DNA sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                      Polypeptide and polynucleotides present in normal and neoplastic ovary cells, useful for identifying, monitoring, staging, diagnosing, preventing and treating ovarian cancer, and non-cancerous disease states

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the disgnostic, prognostic and statistical methods of the invention. This sequence corresponds to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Classifying a breast cancer patient according to prognosis comprises determining the similarity between the level of expression of each of five genes in a cell sample taken from patient, to control levels.

                                                                                                                                                                                                                                                                    The invention comprises amino acid and DNA sequences which are present in normal and neoplastic ovary cells. The DNA and protein sequences of the invention are useful for determining the presence of an ovary specific nucleic acid or an ovary specific protein in a sample. The DNA and protein sequences of the invention are useful for diagnosing and merastrasis of ovarian cancer and breast cancer. Nucleotides ABT03285 - ABT03421 represents the ovary cell specific DNA sequences of the invention
                                                                                                                   Polypeptide and polynucleotides present in normal and neoplastic ovary cells, useful for identifying, monitoring, staging, diagnosing, preventing and treating ovarian cancer, and non-cancerous disease states
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
